User Survey Results: Telemetry Systems
Published January 26, 2017

We surveyed users in July 2016 about their opinions of current models. Here are the results to date. Learn about our survey methods.

Our survey is still running. You can provide your input, and the data will be included the next time we update these results.

- Provide your views on the equipment
- Provide your maintenance experience (this chart may help you collect the device data)

**USER OPINIONS OF TELEMETRY SYSTEMS**
The blue bars show the 90% confidence interval around the average rating. The darker the bar, the greater the number of responses that were used in the calculation of the confidence interval.

User opinions may differ from the ratings published in *Health Devices*. Any notable discrepancies are discussed in our Evaluation.
MAINTENANCE DATA
We surveyed health technology management personnel, including clinical and biomedical engineers, about their experience with these products.

There were no repairs were reported in the past year for the ZM-520/521PA and ZM-530/531PA. (Note: All the data for those models came from a single institution.)
No inspection and preventive maintenance (IPM) was scheduled for the ApexPro, ZM-520/521PA or ZM-530/531PA (as reported by a single institution), or for the IntelliVue MX40 (as reported by a different single institution).

The manufacturer does not require IPM for the AriaTele.
